The LandVault Constitution

Document ID LV-000
Status **RATIFIED — in force.** A working legal document of the LandVault governance framework
Classification Public (Governance)

Table of Contents

Edition v1.8 — Working Edition, Revision H (Ratified)

The supreme governing instrument of the LandVault platform and of The Official LandVault Bible™ · Constitutional Library. This Edition is in force. It is not held, not conditional, and not pending.

Document Control

Document ID	LV-000
Title	The LandVault Constitution
Edition	v1.8 — Working Edition, Revision H
Status	RATIFIED — in force. A working legal document of the LandVault governance framework
Ratified	29 July 2026, by the Governance Authority, on the record set out at Article XVII
Ratification instrument	GD-003 (Article XVI)
Conditions on force	None. This Edition carries no hold, no suspensive condition, and no "pending transcription" qualification
Supersedes	The authored LV-000 v1.7 in its entirety, as a governing instrument. v1.7 is retained as a historical source (Schedule 2)
Consolidates	The adopted LV-000 v1.0 (architecture lineage) and the authored LV-000 v1.7 (values lineage). After this Edition there is one constitution and one lineage
Relationship to the adopted v1.0	v1.0's named principles are incorporated and remain in force verbatim (Article II §4, Schedule 1). Incorporation is permanent and does not expire
Repository of record	`aquasavannah-landvault`
Canonical path	`docs/LV-000-constitution.md`
Governing decisions in force	GD-001, GD-002 (as amended by GD-004), GD-003, GD-004
Prime Directive	LandVault preserves and verifies land evidence. It does not decide who owns land.
Classification	Public (Governance)
Owner	Office of the LandVault Constitution (Governance Authority)
Language	English (UK)

What changed at Revision H, in one sentence. The reconciliation stopped waiting. Where the earlier editions held themselves in suspense until seven adopted principles could be transcribed word for word, this Edition **incorporates those principles by reference in their adopted form** — so they lose none of their force — and then takes force itself, giving the platform a single governing authority today rather than a promised one later.

Preamble

LandVault exists because land evidence in the jurisdictions it serves is fragmented, contested, and frequently unverifiable — and because the harm of that condition falls hardest on those least able to litigate their way out of it.

The platform's answer is deliberately narrow. It **preserves** evidence so that it cannot be quietly altered, and it **verifies** evidence so that its provenance can be shown. It does not resolve competing claims, and it does not tell anyone who owns anything. That restraint is not a limitation of ambition; it is the source of the platform's credibility, and it is constitutionally entrenched at Article IV.

This Edition closes a divergence. Two constitutions were in circulation — one adopted and architecture-oriented, one authored and values-oriented — and they differed in ways that reached shipped code. Closing that divergence by choosing one and deleting the other would have destroyed real governance. Closing it by leaving both in force would have left the platform ungoverned in practice. This Edition takes the third path: it consolidates, records every displacement, and erases nothing.

Amend, never erase.

Part I — Foundation

Article I — Name, purpose and the Prime Directive

§1. Name. This instrument is *The LandVault Constitution*, Edition v1.8, Working Edition, Revision H. It is Volume LV-000 of The Official LandVault Bible™ · Constitutional Library.

§2. Purpose. It establishes the governing authority for the LandVault platform: what the platform may do, what it may never do, how it is built, and how this instrument itself may be changed.

§3. The Prime Directive. *LandVault preserves and verifies land evidence. It does not decide who owns land.*

§4. Entrenchment of the Prime Directive. §3 is the most protected clause in this Constitution. No amendment, ADR, engineering rule, product decision, contract, or line of code may qualify it, create an exception to it, or achieve indirectly what it forbids directly. An instrument that would do so is void to the extent of the conflict, whether or not anyone notices at the time.

Article II — Supremacy, incorporation, and the savings clause

§1. Supremacy. This Constitution is the supreme governing instrument of the platform. Every other document, decision, and artefact is subordinate to it, and no subordinate instrument may contradict it.

§2. Sole governing authority. From the moment of ratification there is **one** constitution. The authored v1.7 ceases to govern anything. The adopted v1.0 ceases to be a *separate* governing instrument and continues instead **through this Edition**,

on the terms of §4. Any assertion that two constitutions govern the platform is, after this date, simply wrong.

§3. Continuity of authority. Nothing in the consolidation diminishes any authority that existed before it. Every rule, doctrine, restriction, and obligation in force under the adopted v1.0 immediately before ratification remains in force immediately after it, in the same terms and with the same effect.

§4. Incorporation by reference — the operative clause. The named constitutional principles of the adopted LV-000 v1.0 are **incorporated into this Constitution by reference, in their adopted form, and remain in force verbatim**. This Edition **restates** those principles it can state accurately (Schedule 1, Part A) and **does not restate** the remainder (Schedule 1, Part B).

§5. Non-restatement is not repeal. A principle that this Edition does not restate is not thereby weakened, narrowed, suspended, or repealed. It governs exactly as it did before, by force of §4. **Silence in this document is silence, not abolition.**

§6. Savings clause — the adopted text prevails. Where any provision of this Edition, any restatement in Schedule 1 Part A, any commentary, or any gloss is inconsistent with the adopted wording of an incorporated principle, **the adopted wording prevails**, this Edition is read subject to it, and this Edition is amended at the next opportunity to conform. The error is corrected against the adopted text; the adopted text is never corrected against this document.

§7. No hold. The operation of §4 through §6 is **immediate, unconditional and permanent**. It does not await transcription, verification, or any further act. Schedule 1 Part B is an **administrative register of restatement work outstanding** — a housekeeping list. It is **not** a condition on the force of this Constitution, and no reader, agent, reviewer, or automated check may treat it as one.

§8. No authorship into the gap. No one may fill a Schedule 1 Part B entry by inventing a principle, inferring one, or reconstructing one from context. An entry is closed only by copying the adopted text unchanged and recording its adopted article number. **Restating a principle wrongly is a graver fault than not restating it at all**, because an incorporated principle that is never restated still governs correctly, while one restated wrongly governs wrongly.

Article III — Closure of the lineages, and citation discipline

§1. The divergence, recorded. Before this Edition, two lineages used the same article numbers for different content. Most consequentially, **Article IX** meant *Controlled Platform Authority* in the adopted lineage and *Engineering Principles* in the authored one — a collision at the precise article on which shipped code depends.

§2. How this Edition resolves it. The numbering of this Edition is **not new**. It is chosen deliberately so that the citations already in circulation continue to resolve correctly:

Citation in circulation	Origin lineage	Under this Edition
Article IX §3 — Controlled Platform Authority	Adopted v1.0	Article IX §3 — unchanged. The protected citation chain resolves without amendment

Citation in circulation	Origin lineage	Under this Edition
Article X.3 — single PDP/PEP authorisation path	Authored v1.7	Article X §3 — unchanged
Article X.4 — kernel-first sequencing	Authored v1.7	Article X §4 — unchanged
Article X — integration by contract	Authored v1.7	Article X §2 — sited within the same Article
Article XV.1 — Trust Neutrality Firewall	Authored v1.7	Article XV §1 — unchanged
Article XV.2 — Delegated Authority	Authored v1.7	Article XV §2 — unchanged
Article IX — Engineering Principles	Authored v1.7	Moved to Article XI. This is the single deliberate displacement in the consolidation

§3. The one displacement, and why. Article IX resolves **in favour of the adopted lineage**, because ``ENGINEERING_RULES.md`` rule 9, ADR-021, ADR-022, ``PLATFORM_INTELLIGENCE_ARCHITECTURE.md``, the B4 Threat Model and SCDS-001 depend on it in that sense, and ADR-022 governs code that has already shipped. The authored engineering principles lose nothing but their number: they are re-sited whole to Article XI, and the move is recorded here rather than performed silently.

§4. The protected citation chain. The chain

LV-000 Article IX §3 → ``ENGINEERING_RULES.md`` rule 9 → ADR-021 → ADR-022 → ``PLATFORM_INTELLIGENCE_ARCHITECTURE.md`` → B4 Threat Model → SCDS-001

survives this Edition **intact and unamended**. No step in it is broken, re-pointed, or left dangling. Preserving it was a governing constraint on the drafting of this Edition, not an incidental outcome.

§5. Citation discipline. Every citation of this Constitution shall carry its edition — "*LV-000 v1.8, Article X §3*", not "*Article X.3*". A citation without an edition is ambiguous across the historical lineages and shall be treated as an error to be corrected, not as a citation to be guessed at.

§6. Renumbering prohibited. Article IX §3, Article X §3, Article X §4, Article XV §1 and Article XV §2 **may not be renumbered** by any future amendment. Their numbers are load-bearing. Content may be amended; position may not.

Part II — Constitutional Principles

Article IV — Evidence over assertion, and non-adjudication

§1. The platform records **assertions with provenance**, never determinations of right. Every ownership-related record is, in law and in the data model alike, *a*

recorded assertion by an identified actor, resting on a stated basis, at a recorded time.

§2. No schema field, API response, user-interface label, report, export, notification, or marketing statement may assert, imply, or be reasonably read as asserting that LandVault has determined title, ownership, or the outcome of a competing claim.

§3. Provenance is not optional metadata. An assertion recorded without its basis, its actor, and its time is an incomplete record and shall be rejected at the boundary rather than stored and annotated later.

§4. Compliance with this Article shall be **mechanically enforced**, not merely asserted. The platform shall carry an automated check that fails the build on ownership-adjudication wording in API responses and user-facing text. A principle enforced only by good intentions is not enforced.

Article V — Bounded Context Sovereignty

Origin: adopted LV-000 v1.0. Incorporated under Article II §4. This Article states the principle's effect for the purposes of this Edition; where the adopted wording differs, the adopted wording prevails (Article II §6).

§1. Each bounded context owns its data and its invariants. No other context may reach past that boundary to read or write what the owning context is responsible for.

§2. Contexts integrate **by contract and by event**, never by shared tables, shared transactions, or direct database access across a boundary.

§3. Unified or cross-context views are **read-model projections**, built from events. A projection is a convenience for readers; it is never a second source of truth and never a place where writes land.

§4. Sovereignty is a design constraint before it is a runtime one: a change that would be easy only by violating a boundary is a change that has not yet been designed.

Article VI — Trust Network Doctrine

Origin: adopted LV-000 v1.0. Incorporated under Article II §4. Same reading rule as Article V.

§1. Trust in the LandVault sense is **networked, earned and observable** — a property that accumulates from recorded, attributable behaviour across participants, not a score assigned by fiat.

§2. Every trust signal shall be traceable to the evidence and the events that produced it. A trust output that cannot be explained by pointing at its inputs shall not be shown to a user or relied on by a workflow.

§3. Trust computation **fails safe**. On missing, stale, or unverifiable data the platform withholds the signal or degrades it explicitly; it never substitutes a default that reads as confidence.

§4. This Doctrine is the constitutional foundation on which `PLATFORM\_INTELLIGENCE\_ARCHITECTURE.md` is built. Subordinate trust

mechanisms — including the Trust Neutrality Firewall at Article XV §1 — serve this Doctrine and are read beneath it.

Article VII — Data, evidence and custody

§1. Sealed evidence is **write-once**. Once sealed, an artefact may be read, verified, and legally held, but never altered or silently replaced.

§2. Every adapter that stores sealed evidence shall **declare its WORM grade** — `compliance` (irrevocable retention with legal hold) or `governance` (retention revocable by a privileged administrator). The grade in force shall be recorded, and shall be visible to those relying on it.

§3. A governance-grade backend is permissible where the deployment's obligations allow it, and shall be **escalated to a compliance-grade backend without code change** where they do not. The provider is a deployment decision; the guarantee is a constitutional one.

§4. Integrity shall be **demonstrable on demand**: hashes computed on write, verified on read-back, and re-verifiable later by a party who was not present when the artefact was sealed.

§5. Chain of custody is recorded for every sealed artefact, and every access to it is audited.

§6. Corrections **append**. Superseded records are retained and marked as superseded. Erasure obligations arising from data-protection law are met through a recorded, counsel-approved procedure — never through silent deletion, and never invented by an implementer at the keyboard.

Article VIII — Identity, access and audit

§1. Every action that changes state shall be attributable to an **authenticated actor**. Anonymous mutation does not exist on this platform.

§2. Tenant isolation is enforced **in the database** as well as in the application. Row-level security ships in the same migration as the entity it protects; a migration that adds an entity without its policy is incomplete and shall not merge.

§3. Every state change writes to the **audit chain**, and every record that a change occurred carries a resolvable reference to its audit entry.

§4. Break-glass and administrative override paths are permitted, are **narrow**, are audited more heavily than ordinary access, and are reviewed on a schedule. An override path that is not reviewed is an unrecorded grant of authority.

Article IX — Controlled Platform Authority

Origin: adopted LV-000 v1.0, Article IX §3. Incorporated under Article II §4. This Article's numbering is fixed by Article III §6 and may not be changed.

§1. **The authority is real**. LandVault is not a passive store. It exercises genuine authority over the evidence and workflows it governs: it decides what is admitted,

what is sealed, what is verified, who may act, and what a workflow's state is at any moment. Pretending otherwise would be a false modesty that leaves real power unexamined.

§2. The authority is controlled. That authority exists **only to the extent it has been granted**, by this Constitution, by a ratified ADR, or by an explicit agreement with a participant. Authority is never assumed from capability: that the platform *could* do a thing is not a reason it *may*.

§3. The boundary — the operative clause. The platform's authority extends to the custody, verification, and workflow of evidence. It does not extend to adjudicating title, ownership, or competing claims, and it may not be extended there by any subordinate instrument. Every grant of platform authority is read subject to this section, and a grant that would cross this boundary is void to the extent that it does.

This section is the anchor of the protected citation chain (Article III §4).
`ENGINEERING\_RULES.md` rule 9, ADR-021, ADR-022 and the documents beneath them cite *LV-000 Article IX §3*. Those citations resolve here and require no amendment.

§4. Accountability follows authority. Wherever the platform exercises authority under §1, it shall be able to show **who** exercised it, **under what grant, on what evidence**, and **when**. An exercise of authority that cannot be reconstructed after the fact was not controlled.

Part III — Architecture and Engineering

Article X — Architectural Principles

Sections 2, 3 and 4 carry the numbering of the authored v1.7 lineage so that citations already in circulation continue to resolve. Their numbering is fixed by Article III §6.

§1. Architecture is constitutional. The structural decisions in this Article are not preferences. They are the form in which Articles IV to IX are actually kept, and a design that abandons them abandons the principles they carry.

§2. Integration by contract. Contexts own their data; they communicate by published contracts and domain events; there are no cross-context transactions; unified views are read-model projections. (*Article V is the principle; this section is its architectural expression.*)

§3. The single authorisation path. Every authorisation decision resolves through **one** policy decision point and its enforcement points. There is no second path, no table-level bypass, no "internal" caller exempted, and no service that authorises itself. Portals, APIs, background workers, administrative tools and read models all traverse the same path.

A second authorisation path is not a shortcut; it is a second constitution, written in code, that nobody ratified.

§4. Kernel first. The kernel — identity, registry, spatial, evidence — is built and hardened **before** marketplace, enterprise, and growth features. Features that depend on the kernel may not be shipped ahead of the kernel capability they assume. Sequencing is a constitutional matter because building in the wrong order is how unverified foundations end up in production.

§5. Ports and provider neutrality. External capabilities are reached through **ports** with swappable adapters — ``StoragePort``, ``GeometryPort``, and their successors. No bounded context calls a provider SDK directly. A provider is a deployment choice; a port is a constitutional commitment, and the difference is what makes the choice reversible.

§6. Seams are declared, not discovered. Where a component is knowingly provisional — an adapter that accepts every input pending a real implementation, for example — that fact is **recorded at the seam**, and the domain contract it sits behind is written so the real implementation can replace it without changing the contract.

§7. Grades and guarantees are declared. Any adapter whose guarantee is weaker than the constitutional requirement declares the gap explicitly (see Article VII §2). Silent degradation of a guarantee is a constitutional violation regardless of whether anything breaks.

Article XI — Engineering Principles

Origin: authored LV-000 v1.7, Article IX, re-sited whole under Article III §3. Substance unchanged; number changed.

§1. Fail safe. On missing, ambiguous, or unverifiable data the system withholds, degrades explicitly, or refuses. It never guesses and presents the guess as fact.

§2. Observed, not assumed. Nothing is "done" until its tests have been **observed** to pass on the actual tree. Inherited claims of green are re-observed before they are relied on.

§3. Reversible by default. Every migration ships a tested ``down``. Rollback is rehearsed on a staging-like environment before it is needed in anger.

§4. Governed dependencies. Adding a runtime or build dependency is a governed act with a recorded approval, not a convenience taken mid-task.

§5. One bounded context per change. Changes are scoped to a single context wherever the work admits it, so that review, revert and blame all remain tractable.

§6. Tests encode the constitution. Where a constitutional requirement can be expressed as an automated check, it shall be — cross-tenant isolation, append-only enforcement, non-adjudication wording, authorisation-path coverage. Enforcement beats exhortation.

§7. Security defects outrank features. No open critical or high-severity finding is carried past a phase gate in exchange for scope.

§8. Documentation moves with the code. A change that alters governed behaviour updates its governing document in the same change, or it is incomplete.

Article XII — Intelligence, scoring and automation

§1. Automated scoring and inference are **subordinate instruments**. They inform decisions; they do not make constitutional ones, and they never make adjudicative ones (Article IX §3).

§2. Every score is **explainable by its inputs** and carries its confidence and its provenance. A score without an explanation is not shipped to a user.

§3. Scoring **fails safe** on missing data (Article VI §3, Article XI §1). Absent input never becomes a confident output.

§4. Automated agents operating on this repository are bound by this Constitution exactly as human contributors are. An agent's grant of authority is explicit, recorded, and revocable; **bulk or implicit grants of automation authority are prohibited**.

Part IV — Governance

Article XIII — Hierarchy of instruments

§1. The order of authority.

1. **LV-000** — this Constitution.
2. **The Bible volumes** — LV-001 to LV-017 (Schedule 3).
3. **Ratified ADRs** — ``docs/adr/``.
4. **Engineering Rules** — ``ENGINEERING_RULES.md``.
5. **Architecture and intelligence documents** — including ``PLATFORM_INTELLIGENCE_ARCHITECTURE.md``.
6. **Plans, gates and definitions of done** — ``REBUILD_PLAN.md``, ``EXECUTION_PLAN.md``, ``PHASE_GATES.md``, ``DOD.md``.
7. **Implementation and code.**

§2. No instrument may contradict one above it. Where it appears to, the higher instrument governs and the lower is corrected — never the reverse.

§3. Summaries are pointers. Operational summaries such as ``CLAUDE.md`` are navigational aids. Where a summary conflicts with the document it summarises, **the document wins**, and the summary is fixed.

§4. Current state versus governing intent. On questions of *what is currently true* — what is frozen, what tests pass, what has shipped — the repository and an observed test run govern. On questions of *what shall be built and how*, the instruments in §1 govern. Confusing the two is how stale summaries acquire authority they were never given.

Article XIV — Amendment, and the Six Tests

§1. Amendment procedure. An amendment is proposed in writing against a specific Article and section; it is checked against the Six Tests at §2; it records what it displaces; and it is ratified by the Governance Authority. Ratification is recorded in the Governance Decision Log (Article XVI).

§2. The Six Tests of Constitutional Authorship. No clause enters this Constitution unless it is:

8. **Traceable** — attributable to an identified source.
9. **Non-inventive** — never fabricating a principle, an article number, or an authority.
10. **Consistent** — compatible with every clause above it.
11. **Testable or enforceable** — capable of being checked, ideally mechanically.
12. **Necessary** — doing work no existing clause already does.
13. **History-preserving** — amending rather than erasing.

§3. Entrenched provisions. Article I §3 and §4 (the Prime Directive), Article II §4 to §8 (incorporation and savings), Article III §6 (renumbering prohibition), and Article IX §3 (the boundary of platform authority) may be amended only by an instrument that expressly identifies each of them and states its reasons. They may never be amended by implication, by general revision, or by a change whose effect on them is not stated on its face.

§4. Nothing is discarded silently. A proposal that fails the Six Tests is **recorded as considered and refused, with the reason**. The record of what was rejected is part of the constitutional history and is not deleted.

Article XV — Governance principles

Sections 1 and 2 carry the numbering of the authored v1.7 lineage. Their numbering is fixed by Article III §6.

§1. Trust Neutrality Firewall. The platform's commercial interests are **structurally separated** from its trust and verification outputs. No pricing tier, partnership, promotional arrangement, or revenue consideration may influence a trust signal, a verification outcome, or the ordering of evidence. The separation is enforced by design — the code paths that compute trust do not receive commercial inputs — and not merely promised by policy. *This mechanism serves the Trust Network Doctrine at Article VI and is read beneath it.*

§2. Delegated Authority. Authority exercised on behalf of another party — a tenant acting for a client, an agent acting for a user, a partner acting under licence — is **explicit, scoped, time-bounded, recorded and revocable**. Delegation never enlarges the delegator's own authority, and it never crosses the boundary at Article IX §3.

§3. Governed change. Changes to governed artefacts follow a recorded path: proposal, review, decision, record. The record survives the people who made it.

§4. Transparency and auditability. What the platform did, who caused it, and under what authority shall be reconstructible after the fact by someone who was not there.

§5. Supremacy of the hierarchy. The order at Article XIII §1 is itself constitutional. Working around it — by putting substantive governance into a summary, a script, a comment, or a habit — is a constitutional violation regardless of the merits of the change.

Article XVI — The Governance Decision Log

§1. Governance decisions are recorded, numbered, and permanent. The following are in force at ratification.

GD-001 — Preservation of adopted Bible Volumes I and II. (*Approved 28 July 2026.*) The adopted ``docs/LANDVAULT_BIBLE_VOLUME_I_EXECUTIVE_OVERVIEW.md`` and ``docs/LANDVAULT_BIBLE_VOLUME_II_PRODUCT_STRATEGY_AND_ENTERPRISE_DEFINITION.md`` are preserved. Any staged deletion of them is restored. Authored volumes do not displace adopted ones by occupying a similar subject.

GD-002 — The plan of record. (*Approved 28 July 2026; amended by GD-004.*) ``docs/REBUILD_PLAN.md`` is the repository's plan of record. ``commit-development-plan.sh`` is retired unrun.

GD-003 — Ratification of Edition v1.8, Revision H. (*Approved 29 July 2026.*) This Constitution is ratified as a working legal document, in force without condition. The "HELD pending verbatim transcription" status is **lifted and shall not be reinstated**; the outstanding restatement work continues as an administrative register under Article II §7 and Schedule 1 Part B. The Governance Authority has considered and accepted that seven adopted principles are incorporated without being restated here, and has determined that incorporation preserves their force in full.

GD-004 — The execution instrument. (*Approved 29 July 2026.*) *LandVault — Development Plan (Execution), Revision H* is ratified as a working legal document and is the platform's **execution instrument**. It is issued at ``docs/EXECUTION_PLAN.md``. GD-002 is amended only to this extent: ``REBUILD_PLAN.md`` remains the plan of record for **phase definitions and gates**, and the execution instrument governs **the ordering and content of delivery work** beneath those gates. Neither displaces the other; where they speak to the same gate, ``REBUILD_PLAN.md`` governs and the divergence is raised as an amendment rather than resolved in place. The prohibition on creating ``docs/DEVELOPMENT_PLAN.md`` and on running ``commit-development-plan.sh`` **stands undisturbed**.

§2. A decision in this Log is amended only by a later numbered decision that names it. Decisions are never edited in place and never removed.

Article XVII — Enactment, transition and continuity

§1. Enactment. This Constitution takes effect on **29 July 2026** upon the ratification recorded at GD-003. It requires no further act to be in force.

§2. Continuity of subordinate instruments. Every ADR, engineering rule, architecture document, gate, and definition of done in force immediately before enactment **remains in force**, and every citation to *LV-000 Article IX §3* continues to resolve (Article III §4). Subordinate instruments are re-anchored to this Edition administratively, as a change of citation form rather than of substance.

§3. Status of the authored v1.7. v1.7 ceases to govern. It is retained as a historical source, its contributions are recorded at Schedule 2 with their disposition, and it is neither deleted nor treated as if it had never existed.

§4. Status of the adopted v1.0. v1.0 ceases to be a separately-governing instrument and continues through Article II §4. Its file remains as the source of the incorporated text, and it is neither superseded in substance nor deleted.

§5. Standing obligation. The Governance Authority shall continue to close the register at Schedule 1 Part B as adopted text becomes available. **That obligation binds the Authority. It does not bind the Constitution's force**, and no failure to complete it invalidates anything done under this Edition.

§6. The rule of construction. Where this Edition is ambiguous, it is read so as to preserve the Prime Directive, preserve incorporated authority, and preserve the protected citation chain — in that order.

Schedule 1 — Register of adopted-v1.0 constitutional principles

Made under Article II §4. This Schedule is a register, not a condition (Article II §7).

Part A — Principles restated in this Edition

#	Principle	Adopted source	Restated at	Force
1	Controlled Platform Authority	Adopted v1.0, Article IX §3	Article IX of this Edition	In force. Adopted wording prevails over the restatement (Article II §6)
2	Bounded Context Sovereignty	Adopted v1.0, article number not yet recorded	Article V	In force, on the same terms
3	Trust Network Doctrine	Adopted v1.0, article number not yet recorded	Article VI	In force, on the same terms

Note to Part A. The restatements at Articles V, VI and IX are this Edition's statements of effect. They were drafted from the principles' names, their adopted article number where known, and the subordinate instruments that depend on them. **They are not transcriptions**, and Article II §6 governs any divergence.

Part B — Principles incorporated but not restated

#	Slot	Status	Force
4	Adopted-v1.0 principle [4]	Name and text not yet recorded here	In force by Article II §4
5	Adopted-v1.0 principle [5]	Name and text not yet recorded here	In force by Article II §4
6	Adopted-v1.0 principle [6]	Name and text not yet recorded here	In force by Article II §4
7	Adopted-v1.0 principle [7]	Name and text not yet recorded here	In force by Article II §4

#	Slot	Status	Force
8	Adopted-v1.0 principle [8]	Name and text not yet recorded here	In force by Article II §4
9	Adopted-v1.0 principle [9]	Name and text not yet recorded here	In force by Article II §4
10	Adopted-v1.0 principle [10]	Name and text not yet recorded here	In force by Article II §4

Note 1 — the count. The figure *ten* is carried from the Governance Authority's own record of the adopted instrument. It is not independently verified here. If the adopted file states a different number, this Schedule is corrected to the real number. **Seven empty rows are not a claim that seven principles exist**; they are the shape of a question only the adopted file can answer, and they are shown rather than hidden.

Note 2 — how an entry closes. By copying the adopted text unchanged and recording its adopted article number. By nothing else (Article II §8).

Note 3 — what an open entry does not do. It does not suspend this Constitution, qualify any Article, or license anyone to act as though the principle is absent.

Schedule 2 — Disposition of the authored v1.7 lineage

v1.7 contribution	Disposition under this Edition
Trust Neutrality Firewall (XV.1)	Adopted by amendment at Article XV §1, subordinated to Article VI. Number preserved
Delegated Authority (XV.2)	Adopted by amendment at Article XV §2. Number preserved
Governed change (XV.3)	Adopted at Article XV §3
Transparency and auditability (XV.4)	Adopted at Article XV §4
Supremacy of the hierarchy (XV.5)	Adopted at Article XV §5
Single PDP/PEP authorisation path (X.3)	Adopted at Article X §3. Number preserved
Kernel-first sequencing (X.4)	Adopted at Article X §4. Number preserved
Integration by contract (Article X)	Adopted at Article X §2, expressed as the architectural form of Article V
Platform, not Aggregate	Merged into Article V (Bounded Context Sovereignty), which is the adopted principle it restated in different words
Evidence over assertion	Adopted at Article IV, joined to the Prime Directive and given mechanical enforcement at Article IV §4
Engineering Principles (Article IX, eight fail-safe rules)	Re-sited whole to Article XI. Substance unchanged; number displaced by Article III §3
Parts I-V structure, Articles I-XX	Not carried. The structure of this Edition is its own. The v1.7 map is retained as a historical finding aid
The claim to be "RATIFIED v1.7, Amendments 1-7"	Withdrawn. v1.7 was never the platform's adopted constitution; the claim is recorded here rather than

v1.7 contribution	Disposition under this Edition
	erased, because the record of an error is part of the history

Schedule 3 — The Constitutional Library

ID	Volume	Status
LV-000	The LandVault Constitution — Edition v1.8, Revision H	RATIFIED — in force
LV-001	Executive Overview	Bible volume
LV-002	Vision, Mission and Principles	Bible volume
LV-003	Product and Platform Strategy	Bible volume
LV-004	Market Analysis	Bible volume
LV-005	Product Requirements (PRD)	Bible volume
LV-006	Technical Requirements (TRD)	Bible volume
LV-007	Security Architecture	Bible volume
LV-008	Enterprise Architecture	Bible volume
LV-009	Database and Data Governance	Bible volume

Schedule 4 — Administrative register of findings to confirm

These are findings of fact to be confirmed by observation. None is a condition on this Constitution.

#	Finding to confirm	Bears on
S4.1	Is B4 begun? The root `CLAUDE.md` records B4 as not started with the highest ADR at 017 ; the extraction record shows B4 Slice 2 shipped under ADR-022 . Both cannot be current	The ADR numbering floor, and the lower reaches of the protected citation chain
S4.2	`docs/LV-000-constitution.md` is absent from `CLAUDE.md`'s pointer index	Article XIII §3. The supreme document should be reachable from the always-loaded summary. Add it
S4.3	Which `CLAUDE.md` cites LV-013, and which LV-013 does it mean?	Schedule 3, and any residual citation to the renumbered volume
S4.4	The five rules in `CLAUDE.md` versus nine-plus in `ENGINEERING_RULES.md`	Not a conflict — a summary and a full set. Citations must name the file they mean

Enactment

This Constitution is enacted on 29 July 2026 and is in force from that date.

From this date the LandVault platform has **one** governing authority. The ambiguity between the adopted v1.0 and the authored v1.7 is closed — not by choosing a winner and deleting a loser, but by consolidating both into a single instrument that keeps every adopted authority intact, records every displacement on its face, and leaves nothing governing in the dark.

What remains outstanding is restatement work, and restatement work is housekeeping. It is written down, it is assigned, and it does not hold the platform still while it waits.

Amend, never erase.

LandVault preserves and verifies land evidence. It does not decide who owns land.
