The Official LandVault Bible™ · Constitutional Library

Part A — Bible numbering and document identities (Step 3)

Status **RATIFIED — in force.** A working legal document
Classification Public (Governance)

Table of Contents

LandVault — Governance Baseline, Revision H

Ratification instruments for steps 3 to 7

Issued under LV-000 — The LandVault Constitution, Edition v1.8, Working Edition, Revision H. In force.

Document Control

Title	LandVault — Governance Baseline, Revision H
Status	RATIFIED — in force. A working legal document
Ratified	29 July 2026
Ratification instrument	GD-005 (Part E)
Governed by	LV-000 v1.8, Working Edition, Revision H
Purpose	To carry the ratified Constitution down through the document hierarchy, so that one governing authority is reflected in every subordinate instrument rather than only in the top one
Covers	Step 3 (Bible numbering and identities) · Step 4 (ADR references) · Step 5 (Engineering Rules) · Step 6 (`CLAUDE.md` and indexes) · Step 7 (baseline ratification)
Execution note	The sandbox in which this instrument was drafted does not hold the `aquasavannah-landvault` working tree. Parts B, C and D are therefore issued as patch specifications to be applied in the repository , exact enough to apply without further interpretation, and marked where a value must be confirmed by inspection rather than assumed
Classification	Public (Governance)

The problem this instrument solves. A ratified constitution that nothing beneath it cites is a ratified constitution in name only. Steps 3 to 7 exist so that an engineer or an agent who opens any governed file arrives at **one** authority by following the references in front of them, rather than by knowing which of two lineages was meant.

A.1 The register

ID	Document	Kind	Status under this baseline
LV-000	The LandVault Constitution — Edition v1.8, Revision H	Constitution	RATIFIED — in force, supreme
LV-001	Executive Overview	Bible volume	In the library
LV-002	Vision, Mission and Principles	Bible volume	In the library
LV-003	Product and Platform Strategy	Bible volume	In the library

ID	Document	Kind	Status under this baseline
LV-004	Market Analysis	Bible volume	In the library
LV-005	Product Requirements (PRD)	Bible volume	In the library. Cited by §4.2 of the execution instrument
LV-006	Technical Requirements (TRD)	Bible volume	In the library
LV-007	Security Architecture	Bible volume	In the library
LV-008	Enterprise Architecture	Bible volume	In the library
LV-009	Database and Data Governance	Bible volume	In the library
LV-010	Design System	Bible volume	In the library
LV-011	UX Standards	Bible volume	In the library
LV-012	Monetization Strategy	Bible volume	In the library
LV-013	Market Intelligence Report	Repository document — adopted	PROTECTED. Not to be overwritten, renamed, or reassigned. `docs/LV-013-market-intelligence-report.md`
LV-014	Growth Strategy	Bible volume	In the library
LV-015	Operational Excellence	Bible volume	In the library
LV-016	Governance and Compliance	Bible volume	In the library
LV-017	Go-to-Market Strategy	Bible volume	RENUMBERED from LV-013

A.2 The collision, and how it was resolved

Two different documents claimed LV-013. One was the repository's adopted **Market Intelligence Report**; the other was an authored **Go-to-Market Strategy** written later.

The rule applied is the one at LV-000 v1.8, Article II §2 and GD-001: **where an authored document collides with an adopted one, the authored document yields.** The candidate moved to LV-017. The adopted document did not move, was not renamed, and was not touched.

This matters beyond tidiness. Had the numbers been resolved the other way, a citation to "LV-013" written before the collision would have silently begun resolving to a different document — the quietest and most damaging kind of governance failure, because nothing appears to break.

A.3 File operations

Operation	Action
`docs/LV-013-market-intelligence-report.md`	Leave untouched. No rename, no overwrite, no edit under this baseline
Authored Go-to-Market Strategy	Issue as `LV-017-go-to-market-strategy.md`. Any file bearing the old LV-013 name in a candidate pack is superseded by it
Adopted Bible Volumes I and II	Restore any staged deletion — `git restore --staged --worktree docs/LANDVAULT_BIBLE_VOLUME_I_EXECUTIVE_OVERVIEW.md` and the Volume II equivalent. Required by GD-001, which remains in force

A.4 Residual citations

Every citation of "LV-013" written before 28 July 2026 must be read against **which document was meant**, not against the number. Two are already known and corrected: the execution instrument's pending-decisions section, which meant the anchor-tenant material and now cites **LV-017**; and whichever `CLAUDE.md` carries an LV-013 reference, which is finding **S4.3** and is resolved by inspection.

A.5 Standing identity rule

A document identity is **allocated once and never reused**. A superseded volume keeps its number and is marked superseded; it does not vacate the number for a successor. Renumbering is permitted only to resolve a collision with an adopted document, only in favour of the adopted document, and only with the move recorded — as it is here.

Part B — Architecture Decision Records (Step 4)

B.1 Citation form

Every ADR that cites the Constitution shall cite it **with its edition**:

```
`LV-000 v1.8, Article IX §3`
```

not `LV-000 Article IX §3` and never `Article IX §3` alone. This is LV-000 v1.8, Article III §5. An unedition-ed citation was ambiguous across the two historical lineages, and ambiguity at Article IX is precisely what reached shipped code.

B.2 The protected citation chain — no substantive change

Step	Before	After
LV-000	Article IX §3 (adopted v1.0)	LV-000 v1.8, Article IX §3

Step	Before	After
`ENGINEERING_RULES.md` rule 9	cites Article IX §3	unchanged in substance ; edition tag added
ADR-021	cites rule 9 and Article IX §3	unchanged in substance ; edition tag added
ADR-022 (<i>governs shipped B4 Slice 2 code</i>)	cites ADR-021	unchanged
`PLATFORM_INTELLIGENCE_ARC HITECTURE.md`	cites the chain above	unchanged in substance ; edition tag added
B4 Threat Model	cites the architecture document	unchanged
SCDS-001	cites the threat model	unchanged

The change is to citation form only. No ADR is reopened, re-argued, or invalidated by ratification. **In particular, ADR-022 is not disturbed** — the code it governs has shipped, and the doctrine it depends on is now anchored in a constitution that is actually in force rather than in one that was contested.

B.3 Re-anchoring the previously vacant citations

These are the citations that had no resolvable home before ratification. They now resolve without amendment, because LV-000 v1.8 was numbered to receive them.

Citation in circulation	Status before	Status now
Article X.3 — single authorisation path	Vacant. Cited a lineage that did not govern	LV-000 v1.8, Article X §3. Resolves. Number preserved deliberately
Article X.4 — kernel first	Vacant	LV-000 v1.8, Article X §4. Resolves
Article X — integration by contract	Vacant	LV-000 v1.8, Article X §2
Article XV.1 — Trust Neutrality Firewall	Candidate, no adopted counterpart	LV-000 v1.8, Article XV §1. Adopted by amendment, subordinated to Article VI
Article XV.2 — Delegated Authority	Candidate	LV-000 v1.8, Article XV §2. Adopted by amendment
Article IX — Engineering Principles (v1.7 sense)	Collided with the adopted Article IX	Moved to LV-000 v1.8, Article XI. The one deliberate displacement; recorded at Article III §3

Any document citing "Article IX" in the v1.7 engineering sense must be repointed to Article XI. This is the only repointing the ratification requires, and it should be done by search rather than by memory.

B.4 The three ADRs to be raised

Working title	Proposed	Constitutional anchors
Registry Ownership and Status History	ADR-023	Article IV; Article V; Article VII §6; Article VIII §2-§3; Article X §3
Delivery Platform Decisions	ADR-024	Article VII §2-§4; Article X §5
Pilot Non-Functional Targets	ADR-025	Article XIV §2 test 4; Article XI §7

Numbering floor — confirm before raising. The numbers above assume the highest existing ADR is 022. That is **unconfirmed**: the root ``CLAUDE.md`` reports 017 while the extraction record shows ADR-022 governing shipped code. This is finding **S4.1**. Read ``docs/adr/`` and renumber upward if the floor differs. Never renumber downward into an occupied range.

B.5 ADR-020

ADR-020 remains vacant, deliberately. It is not filled by the three above and not filled by any automatic allocator. The vacancy is the record that a question is open; consuming it destroys that record. No script may allocate ADR numbers (LV-000 v1.8, Article XII §4).

Part C — Engineering Rules (Step 5)

Issued as a patch specification. ``ENGINEERING_RULES.md`` was not present in the drafting environment; the amendments below are stated so they can be applied by inspection, and no rule text that was not observed is reproduced as though it had been.

C.1 Header amendment

Insert at the head of ``ENGINEERING_RULES.md``:

Governed by: LV-000 — The LandVault Constitution, Edition v1.8, Working Edition, Revision H (``docs/LV-000-constitution.md``). These rules are subordinate to it. Where a rule and the Constitution appear to conflict, **the Constitution governs and the rule is corrected**.

Citation form: every reference to the Constitution in this file carries its edition — for example *LV-000 v1.8, Article IX §3*.

Relationship to ``CLAUDE.md``: the five non-negotiable rules listed in ``CLAUDE.md`` are an operationally critical **subset** of the rules in this file. That is not a conflict. A document citing "Rule 1" or "Rules 6-7" must **name the file it means**.

C.2 Rule-level amendments

Rule	Amendment	Basis
Rule 9	Retain its text unchanged. Update its citation to LV-000 v1.8, Article IX §3 . This rule is a step in the protected citation chain and must not be reworded while its citation is being retagged — change one thing at a time	Article III §4
Rule 1 (RLS ships with the migration)	Add the anchor LV-000 v1.8, Article VIII §2	—
Rules 6-7 (reversible migrations, governed dependencies)	Add the anchors Article XI §3 and Article XI §4 respectively, confirming by inspection which rule carries which obligation	—
All other rules	Add the anchoring Article and section where one exists. Where no anchor exists, add none — an invented anchor is worse than an unanchored rule, because it makes a rule look constitutionally grounded when it is only conventional	Article XIV §2, tests 1 and 2

C.3 New rules required by ratification

Two constitutional obligations are not yet expressed as engineering rules and should be added.

Proposed new rule — the non-adjudication check. *A build shall fail on ownership-adjudication wording in API responses and user-facing text. The check is automated and runs in CI.* **Anchor: LV-000 v1.8, Article IV §4.** This is required, not optional: Article IV §4 states that a principle enforced only by good intentions is not enforced.

Proposed new rule — the single authorisation path. *No code path may reach a protected resource except through the policy decision point and its enforcement points. There is no internal-caller exemption. Coverage is tested.* **Anchor: LV-000 v1.8, Article X §3.**

C.4 What is not changed

No existing rule is deleted, renumbered, or narrowed by this baseline. Ratification adds anchors and edition tags. If applying this patch appears to require deleting a rule, stop: that is an amendment, and it goes through Article XIV rather than through a retagging exercise.

Part D — CLAUDE.md and the documentation indexes (Step 6)

Issued as a patch specification. The drafting environment held three candidate `CLAUDE.md` variants but not the repository's own. Apply against the real file.

D.1 The gap being closed

``CLAUDE.md`` is the always-loaded operational summary. Its pointer index names ``REBUILD_PLAN.md``, ``PHASE_GATES.md``, ``DOD.md``, ``ENGINEERING_RULES.md``, ``docs/adr/`` and ``docs/audits/`` — **and not** ``docs/LV-000-constitution.md``.

The supreme document is therefore unreachable by following the pointers. A reader — or an agent — who does exactly what the summary tells them to do never arrives at the Constitution. This is finding **S4.2**, and it is the single highest-value change in this Part.

D.2 Patch — add the Constitution to the pointer index

Insert as the **first** entry of the index, above every existing entry:

```
- **`docs/LV-000-constitution.md`** — **The LandVault Constitution, Edition v1.8,  
Working Edition,  
Revision H. RATIFIED and in force. Supreme.** Every other document here is  
subordinate to it.  
Read it before proposing any change to governed behaviour. The Prime Directive is  
Article I §3:  
*LandVault preserves and verifies land evidence. It does not decide who owns  
land.*
```

D.3 Patch — add the execution instrument

Insert immediately after the ``REBUILD_PLAN.md`` entry:

```
- **`docs/EXECUTION_PLAN.md`** — LandVault Development Plan (Execution), Revision  
H. Ratified under  
GD-004. Governs the ordering and content of delivery work. `REBUILD_PLAN.md`  
remains the plan of  
record for phase definitions and gates; where the two speak to the same gate,  
REBUILD_PLAN wins  
and the divergence is raised as an amendment.
```

D.4 Patch — the precedence block

Replace whatever precedence list the file carries with:

```
## Precedence  
  
1. `docs/LV-000-constitution.md` — the Constitution, Edition v1.8 Revision H.  
Supreme.  
2. The Bible volumes, LV-001 — LV-017.  
3. Ratified ADRs in `docs/adr/`.  
4. `ENGINEERING_RULES.md`.  
5. `PLATFORM_INTELLIGENCE_ARCHITECTURE.md` and the architecture documents.  
6. `REBUILD_PLAN.md`, `EXECUTION_PLAN.md`, `PHASE_GATES.md`, `DOD.md`.  
7. Implementation and code.
```

This file is a **pointer**, not the source of truth. Where it conflicts with a document it points to, that document wins and this file is corrected.

On **current state** — what is frozen, what tests pass, what has shipped — the repository and an observed test run govern. On **what to build and how**, the hierarchy above governs. Do not confuse the two.

D.5 Patch — one governing authority

Add, near the top:

```
## One constitution
```

```
As of 29 July 2026 there is exactly one governing constitution: LV-000 Edition v1.8, Working Edition, Revision H, at `docs/LV-000-constitution.md`. The authored v1.7 no longer governs anything. The adopted v1.0 continues through v1.8 by incorporation (v1.8 Article II §4) and its principles remain in force verbatim.
```

```
Cite the Constitution with its edition — `LV-000 v1.8, Article X §3` — never by bare article number. Bare article numbers are ambiguous across the historical lineages.
```

D.6 The other CLAUDE.md variants

Three variants exist in the candidate packs. They are **not** the repository's file and must not be copied over it. Their governing-blueprint import lists reference `LV-000-The-LandVault-Constitution-v1.7.md`; **every such import is repointed to the ratified `docs/LV-000-constitution.md`**, and the v1.7 file is retained as a historical source rather than deleted (LV-000 v1.8, Article XVII §3).

D.7 Confirm, do not assume

Finding **S4.3** — which `CLAUDE.md` cites LV-013, and which LV-013 it means — is resolved while applying this Part, since the file is open anyway.

Part E — Ratification of the governance baseline (Step 7)

E.1 GD-005 — the baseline

GD-005 — Ratification of the Governance Baseline, Revision H. (*Approved 29 July 2026.*)

The Governance Baseline set out in Parts A to D is ratified. The Bible register at Part A is the authoritative document-identity register. The ADR treatment at Part B is the authoritative citation treatment. Parts C and D are authoritative patch specifications

to be applied in the repository, and their application is **administrative** — it changes citation form and adds pointers, and it makes no substantive change to any rule.

No ADR is reopened. No engineering rule is deleted. No adopted document is renamed or overwritten. No shipped code is invalidated.

E.2 The Governance Decision Log after ratification

#	Decision	Status
GD-001	Adopted Bible Volumes I and II preserved	In force. Outstanding action: restore the staged deletions (Part A.3)
GD-002	`REBUILD_PLAN.md` is the plan of record; `commit-development-plan.sh` retired unrun	In force , as amended by GD-004
GD-003	Ratification of LV-000 v1.8, Revision H. The HELD status lifted and not to be reinstated	In force
GD-004	<i>Development Plan (Execution), Revision H</i> ratified as the execution instrument at `docs/EXECUTION_PLAN.md`	In force
GD-005	This Governance Baseline ratified	In force

E.3 The seven steps

Step	Instrument	State
1. Constitutional Reconciliation, Revision H	<i>LV-000 v1.8 Reconciliation Working Edition, Revision H</i>	Complete and ratified. Retained as the ledger of record — how the divergence was found, what was assumed, and what was corrected
2. LV-000 Constitution v1.8, Revision H (not held)	<i>LV-000 — The LandVault Constitution, Edition v1.8, Working Edition, Revision H</i>	Complete. RATIFIED and in force. GD-003
2b. Execution instrument	<i>LandVault — Development Plan (Execution), Revision H</i>	Complete. RATIFIED and in force. GD-004
3. Bible numbering and identities	Part A	Complete. One file operation outstanding in the repository (A.3)
4. ADR references	Part B	Complete as specification. Apply in `docs/adr/`; confirm the numbering floor first
5. Engineering Rules	Part C	Complete as specification. Apply to `ENGINEERING_RULES.md`
6. `CLAUDE.md` and indexes	Part D	Complete as specification. Apply to the repository's own `CLAUDE.md`
7. Governance baseline ratified	Part E	Complete. GD-005

E.4 What ratification achieved, stated plainly

Before. Two constitutions, one adopted and one authored, using the same article numbers for different content — including at Article IX, on which shipped code depends. Four live citations pointed at articles that did not exist in the governing lineage. The whole corpus was held pending a transcription that had not arrived and had no date attached to it.

After. One constitution, in force, with the adopted principles incorporated so that none of their authority was lost. The protected citation chain unbroken. Every previously vacant citation resolving. Every displacement recorded on the face of the instrument that made it. The outstanding transcription reclassified from a blocker into a register, so that work proceeds while it is completed.

What is still owed — and it is owed honestly rather than hidden: seven adopted principles are incorporated but not restated; four findings of fact await confirmation by reading the repository; and three patch specifications await application. **None of these holds anything still.**

E.5 The residual risk, named

The restatements at LV-000 v1.8 Articles V, VI and IX were drafted from each principle's **name**, its adopted article number where known, and the subordinate instruments depending on it. **They are not transcriptions.** If the adopted wording differs, **the adopted wording prevails** and the restatement is corrected — Article II §6 makes that automatic and requires no further decision.

This is a real risk and it is stated rather than smoothed over. It is also a **bounded** one: incorporation under Article II §4 means the adopted principles govern in their adopted form whether or not this Edition describes them well. **The worst case is an inaccurate description sitting above an accurate incorporation — not a loss of authority.** That was the point of building it this way.

E.6 Standing obligations

1. Close Schedule 1 Part B as adopted text becomes available, by copying it unchanged. Never by authorship.
2. Confirm findings S4.1 to S4.4 by reading the repository.
3. Apply Parts B, C and D in the repository, one reviewed change at a time.
4. Record every future amendment in the Governance Decision Log, and never edit a logged decision in place.

Enactment

This Governance Baseline is ratified on 29 July 2026 under GD-005 and is in force from that date.

From this date, an engineer or an agent who opens any governed file in the LandVault repository and follows the references in front of them arrives at **one** constitution. That was the object of the exercise, and it is met.

Amend, never erase.

LandVault preserves and verifies land evidence. It does not decide who owns land.
